

Homework 4: Due Session 5

Flash Assignment:

1. Complete the wireframe prototype using buttons to navigate to index page & subpage for at least 2 layout directions (4 designs total).
2. Use two different color palettes—one for each set. Use two Kuler palettes to practice using Kuler. These two palettes you should show in your Project Notebook as part of three palette swatches for the assignment below.
3. Publish and upload to server.

Project Notebook:

1. Sketch & color **3 radically different** design comps for a secondary page. Explore three different full compositions representing fonts (approximate and add notes), color palette, layout, navigation and image display. Focus on navigation design. Use 3 full pages.
2. For the color palette, print out three [Kuler color themes](http://kuler.adobe.com) (your own or someone else's) and paste a small color swatch onto the design comp that you draw. Tell us the name of the Theme from Kuler. You will have to create a Kuler account to do this (it's free).

If you don't want to use a color printer (or don't have access to one) then use your color media (pens, color pencils, markers) to depict it as best as you can in a swatch style. Tell us the Kuler names, too, so we can look them up online.
